

Film cutter Product Information

On the FSxxx we can offer a nice cutting system.

This system will cut after every cycle the film. People save time because manual cutting of film belongs to the past.

With the FROMM FS4xx standard machine:

- Per program can be selected if the film will be cut in automatic way;
- Film length after cut can be selected;
- Tension on film, during cutting can be selected (Special for light pallets);
- Pre Stretch before cutting can be selected;

Many parameters can be pre-installed to insure to optimal working system.

(Big variety in dimension of pallets is not advisable)
